 3
     * File Name: vga_sync.v
 4
     * Project: VGA Sync
 5
     * Designer: Marc Cabote
     * Email: marcdominic011@gmail.com
 6
 7
     * Rev. Date: 11 October, 2017
 8
9
     * Purpose: This module will generate the hysnc signal. Hsync
10
               specifies the time required to scan a row. This module also
11
               generates the vsync signal which takes care of the time
12
               required to scan the entire screen. This will take into account
1.3
               a screen with 640 x 480 resolution with has a 25 \text{Mhz} refresh rate.
14
15
     * Notes:
               - This module has an asynchronous reset input.
               - vide on enables objects to be displayed
16
